

Iteration 2 continues

- Show your customer your progress.

### **Burndown chart.**

- Create build files and scripts for your project.

### **Noah built a batch file using MSBuild, and IIS-EXPRESS**

- For
  - Those using Java, create an ANT build scripts that will build, run, and clean your project. You can use/test it in Eclipse!
  - Others, write a script (windows or Unix) that allows your project to be built, ran, deployed on the server, or some other aspect of setup.
- Include documentation on how to run your build scripts.
- Demonstrate your fully functional version control system to your customer.

### **We will be showing you GIT**

- GIT or SVN?
  - Every member of the group must have checked in something.
  - Demonstrate the main trunk of work to the customer and any branches.
- For a feature you have yet to develop, write a Test for it first as described in [Test Driven Development](#) . Demonstrate it to the customer. Run the test showing that it is "Red"
  - For Java users, create a JUNIT test before developing the code.
  - For others, write a test suite that covers your new feature.

### **Selenium for ASP.NET**

- Don't forget your agendas for next 2 meetings!

### **Iteration 3 Week 7th**

- **Present Testing plan to the customer. They will evaluate the plan and must agree/sign off on what they need.**

**It will include list of all unit tests plan**

**All integration tests, system tests.**

**How and who will do the white box, grey box and black box.**

**3 white box test, 3 grey box, 3 black box test**

- **Customer will run test/build script. And will evaluate on it.**
- **This will be the second last meeting.**
- **Customer will tell his the final feature list the require by the time.**
- **Showing the documentation**
- **Showing iteration 2 completed features**
